Oakware Corporation TECHNICAL TRAINING GROUP

Our Training Team's goal is to offer high quality technology transfer, tailored to our client's needs throughout the U.S. and abroad. Our individual training team members have had several years of experience engaging with partners throughout Latin America helping them with technical presentations, seminars, hands-on workshops, and regular courses.

People are the key. If they understand your goals and their role in the organization, and they can acquire the skills that allow them to perform their job well, the organization is assured of long-term success.

Well-trained, knowledgeable employees are the most important resources you have. How can you make sure that you and your employees stay at the top of your game? Learning can rarely begin until individuals are properly prepared to learn. In order for this to happen, they must first be made aware of the information they are expected to learn. Most importantly, they must be made aware in a way that keeps them interested and motivates them to make and keep the training process productive.

Oakware helps his partners with seminars and hands-on workshops each time a new release of the tools or products they are working with is available, and complement every consulting service with technology transfer.

All the reasons above are driving Oakware to new learning technologies. Oakware's Training Team is developing new e-Learning courses that you will have available very soon for your convenience. Imagine you taken a class over the Internet, at your own pace, in your own place.

Why e-Learning?

The biggest area of growth in the Internet will be e-Learning

Internet's second wave

e-Learning has been referred to as the Internet's "second wave". By 2002, analysts estimate that 2.5 million North Americans will be online students.

e-Learning isn't the future of the Internet; it's already here and ready to use today. With e-Learning, you can immediately start to improve your job skills, or the job skills of your team, department, or even your entire company.

Increases productivity

e-Learning increases the productivity and improves the results of learning throughout organizations.

e-Learning helps to improve the performance of the entire company, which, ultimately, helps improve your bottom line.

e-Learning allows you to start creating a better skilled, better performing workforce.

Solution Oriented

Whatever your profession or area of expertise, you can use e-Learning to sharpen your skills and increase your knowledge.

Budget challenges?

e-Learning is the answer if you need to get your people trained and still stay under budget. There are no travel expenses or long meetings, and new employees can train at their desks when they have the time. In fact, if they have a computer with Internet access at home, they can even start their training before their first day.

Maintain people's interest

e-Learning helps keep individuals and employees interested in training or in an educational program by making learning convenient, relevant, immediate, and excellent.

- Convenient. e-Learning allows people to learn from work and home.
- Relevant. e-Learning ensures training is applicable to a person's career and business objectives.
- Immediate. e-Learning allows people to begin their training in the Internet, with just a few mouse clicks.
- Excellent. e-Learning not only effectively keeps people up-to-date, but interested as well.

Oaksware's offer

Our e-learning courses will be designed to help you to refresh or update your skills, or learn a completely new set of skills.

With them you will:

- Train quickly, easily, and effectively your employees to make sure everyone have the necessary skills.
- Provide effective employee training and instruction.
- Create a reserve of properly trained personnel within your department.
- Win the confidence and cooperation of your workers.
- Improve your own prospects by creating and supervising an effective, efficient workforce.
